

INTABIOTECH

Unlimited Innovation

Innovation transformed into real market solutions

A company built to transform science into results

Our mission

To transform scientific knowledge, expertise in manufacturing and development, as well as the wealth of regulatory knowledge into solutions that make products safer, healthier, and more competitive, without losing sight of the day-to-day industrial reality.

Much more than a supplier

INTABIOTECH is a global biotechnology, food, and chemical company, specialising in **R&D&i** and **Sourcing & Supply**. It does not just sell raw materials: it sells the capacity to solve problems, accelerate projects, and improve business results.

An innovation operating system

Innovation at INTABIOTECH connects science, formulation, quality, regulation, supply, and industrial application under a single, coherent, and executable architecture.

GLOBAL REACH

"Unlimited Innovation" backed by real data

The associated network of ND Pharma & Biotech operates with an active presence across five continents, combining breadth of sourcing with deep technical specialisation.

27+

Production centres

Manufacturing capacity
distributed globally

400+

Approved suppliers

Supply network with exacting
standards

51

Sectors served

Proven cross-sectional versatility

35+

Years of experience

Consolidated track record and
trust

More than **310,800 references**, over **358 clients** and **19 distributors** worldwide make INTABIOTECH a partner with real capacity for scale, sourcing flexibility, and depth to serve very diverse projects without losing specialisation.

Built to convert knowledge into competitive advantage

Root cause approach

INTABIOTECH does not limit itself to "adding ingredients". It works to understand what is blocking the client: contamination, insufficient shelf life, organoleptic loss, complex reformulation, formulation cost or functional product deficiencies.

Everything under one roof

The company brings together scientific back office, commercial, regulatory, legal and R&D&i departments into a single organisation. For the client: fewer fragmented points of contact, zero contradictions between commercial promise and technical reality.

Execution partner, not just a supplier

In markets where too many suppliers promise much but provide little support, this internal architecture allows INTABIOTECH to move from idea to operational project with greater speed and less friction.

Food safety, shelf life and brand protection

If there is one area in which INTABIOTECH is particularly recognisable, it is that of **food safety**. The company develops innovations across all sectors of the food system, where costs, claims, losses and reputational risk are concentrated.

PureNis® & FortiMax™

Antibacterial peptides and lauric arginate-based solutions active against *Listeria*, *E. coli* and *Salmonella* in meat, cheese, dairy and fish products.

Clean label antioxidants

Carnosol™, GreenCha™, OxiProt™ and SunOlive™: dual protection against lipid oxidation and microbial growth with a natural narrative aligned with regulatory demands.

Preservation & shelf life

Cold sterilisation, natural disinfection and shelf life extension: less waste, a wider logistics window, better brand stability and lower reputational exposure.

REFORMULATION

Less sodium, same functionality, better positioning

ReduXalt™: the leading salt reduction technology

INTABIOTECH possesses technologies capable of reducing sodium by between **20% and 100%**, whilst maintaining sensory integrity, favouring clean labelling and implementing staged reductions in categories of high technological sensitivity such as processed meats, snacks and cheeses.

The promise is not merely nutritional: it is a reduction that preserves the **technological function of salt** and, therefore, the industrial viability of the reformulated product.

The strategic advantage

A response to regulatory and health pressure without sacrificing consumer acceptance or disrupting the production process. Gradual reductions can prove imperceptible, facilitating reformulation strategies without damaging the consumption experience.

INTABIOTECH operates precisely where innovation becomes difficult: **on the frontier between public health, industrial performance and sensory pleasure.**

Cross-sector innovation in food and beverages

Since 2014, INTABIOTECH has been commercialising extraordinary ingredients with multiple applications. It operates in major product categories where the tension between cost, safety, labelling, texture, flavour, stability and speed of development is constant.

Milk & Dairy

Solutions for dairy, cheeses and desserts with a focus on safety, texture and clean label.

Meat & Poultry

Preservation, sodium reduction and organoleptic improvement in processed meats.

Bakery, Confectionery & Pastry

Shelf-life extension, natural antimicrobials and bespoke solutions for bakery and confectionery.

Cocoa & Natural Substitutes

Raw materials, advanced formulation and solutions even in categories as sensitive as cocoa and its alternatives.

Nutraceuticals and personalised nutrition: from ingredient to value proposition

Science-backed ingredients

Patented formulations, clinical backing and transparent documentation for regulatory compliance aimed at muscle health, cellular health, energy and general wellbeing.

Data-driven nutrition

Biomarkers, root cause, precise formulation and artificial intelligence to make formulations smarter and more effective. Personalised nutrition as a strategic differentiator.

"A company that talks about personalised nutrition, scientific support and clinical backing is inviting the customer to purchase a strategic asset, not just an input."

This approach is especially useful for supplement, preventative health and functional wellbeing brands that need to build narrative, credibility and differentiation at the same time. INTABIOTECH occupies precisely that premium value space, which is difficult to commoditise.

Baby Food & Sports Nutrition: technical specialisation where it matters most

Baby Food

High-purity minerals for infant formulae (calcium, iron, magnesium, zinc), with rigorous control of chlorates and perchlorates, various certified grades (AL, CNFS, FCC, FDA, BF) and expertise in the European regulatory framework for infants. **Here, technical depth is not an added bonus: it is a prerequisite for entry.**

Sports Nutrition

Comprehensive portfolio of amino acids (BCAAs, creatines, citrulline, glutamine, arginine, beta-alanine), pure fruit, vegetable, herbal and mushroom extracts, and specialities for energy, performance, metabolism and recovery. **Complete functional blocks for performance brands and functional drinks.**

Plant extracts, flavours and colours: naturalness with a technical basis

INTABIOTECH responds to the market for naturalness without losing technical rigour. Its extracts are traceable, sustainable, 100% natural, obtained through patented systems and are of ultra-premium quality.

Plant Extracts

Extracts with adulteration control throughout the supply chain.

BerryCaf™: native caffeine and coffee fruit polyphenols obtained through proprietary technology, with guaranteed authenticity of origin.

SuperNatural — Colours & Flavours

More than **2,000 references** in powder, encapsulated, freeze-dried, liquid and emulsion formats. Certifications on demand: Non-GMO, gluten-free, MSG-free, organic. Solutions for food, beverages, nutraceuticals and oral care.

- ❏ INTABIOTECH's innovation enters the decisive territory of **sensory experience**, product identity and the adaptation of the organoleptic profile to the target market.

OWN BRAND

ITB Cocoa: a brand that raises industrial stature

Processed in Spain, global standards

ITB Cocoa is cocoa powder fully processed in Spain under EU, FDA and Codex Alimentarius standards. A vocation for excellence from the importation of raw materials to the processing and export of high-quality products.

A dual commercial asset

ITB Cocoa demonstrates that INTABIOTECH does not just help others to innovate: it also **builds its own platforms of industrial value**.

- Proprietary quality, traceability and process control
- International positioning in a global category
- Applications in food, functional drinks and cosmetics
- Greater industrial density and legitimacy to speak about the market

Feed and animal health: innovation beyond human consumption

The Feed division showcases a very wide portfolio of ingredients and specialities for animal feed, nutrition, and health, with individualised management and a focus on welfare, disease prevention, and productive efficiency.

Active formulations

Acids, salts, vitamins, amino acids, minerals, disinfectants, and bespoke liquid formulations: acidifiers, antifungals, preservatives, premixes, and rehydrators.

Chain transversality

A company that operates with solvency in human food and in feed conveys a broader understanding of the agri-food chain and its critical points.

Brand architecture

ACARISIN™, BicarPlus™, GRUMAX™, SANIFEED™, NEWPODDAL™ and many others: multisectoral portfolio with high-value proprietary names.

Women's Health, cosmetics and hyaluronic acid: expansion towards precision wellbeing in all phases of a woman's life

Women's Health

INTABIOTECH recognises historical gaps in R&D directed at female health and proposes this field as a strategic horizon. Nutritional solutions adapted to key life transitions: adolescence, pregnancy and the menopause, with a scientific and market-focused approach.

Hyaluronic Acid, Collagen, Joint Health

Top quality, affordable cost and availability in food, cosmetic and other grades. An ingredient bridging nutrition and functional beauty.

Cosmetics & Personal Care

Cosmetic and beauty solutions from green chemistry to marine biotechnology. Raw materials manufactured under total quality criteria and good manufacturing practices.

- ❑ Science, perception of quality and **storytelling** converge in high-value-added categories where INTABIOTECH is building a differentiated position.

Fine chemistry and internationalisation: sectoral breadth with global capacity

INTABIOTECH operates as a "**global active chemical commercial company**", serving markets as diverse as construction, coatings, energy, food and beverages, personal care and laboratory research all over the world.

This breadth conveys that the innovation of INTABIOTECH is not confined to a niche: the company can work where ingredients, processes, applied chemistry, formulation, regulated markets and international supply chains converge.

KEY DIFFERENTIATOR

DRC Unit: accelerating market access with regulatory certainty

Dossiers, Compliance & Regulatory Access

An outsourced regulatory access service for documentary defence, risk reduction and commercial acceleration. The promise: **lower probability of blockage, greater clarity of route, better support during audits and increased commercial speed.**

Priority services of the DRC Unit

- Label and *claims* review
- Compliance packs for supplements and FCM
- Regulatory due diligence and selective renewals
- Country-by-country matrices and Novel Food pre-assessment
- Legal and scientific profiles, and AI-supported solutions

The DRC Unit transforms innovation into something **more marketable and less risky**. It is not an administrative add-on: it is a direct lever for market access and margin protection.

AN INTEGRATED VISION

The true advantage: an integrated platform, not a fragmented catalogue

When observing the entire offering, the most robust message that emerges is this: INTABIOTECH has built an **integrated innovation platform**.

Not all of these areas have the same level of maturity, but together they compose a coherent picture of a versatile, ambitious and technically-orientated company, capable of converting complex industrial needs into marketable, scalable and regulatorily-defensible solutions.

VALUE PROPOSITION

Why choose INTABIOTECH as your strategic partner

Applied science

R&D&i with a root-cause approach and clinical backing that elevates the perceived value of every solution

Global network

More than 27 production centres, 400+ suppliers and a presence across 5 continents with real-world scaling capacity

Regulatory support

DRC Unit as a lever for market access, documentary defence and integrated commercial acceleration

End-to-end execution

From concept to market: formulation, ingredient, regulatory dossier and technical support all under one roof

INTABIOTECH: innovation that reaches the market

"INTABIOTECH represents a demanding and contemporary way of innovating. It is not limited to following trends; it works to convert them into formulations, ingredients, brands, dossiers and solutions that work in industrial reality."

Its value lies not only in the breadth of its portfolio, but in the combination of **science, production network, market sensitivity, regulatory support and dedication to technical service**. In an environment where clients need partners that are increasingly less transactional and increasingly more decisive, INTABIOTECH can present itself with full legitimacy as the company that transforms innovation into **safety, competitiveness, differentiation and growth**.

Safety Safer products, extended shelf life, lower reputational risk	Competitiveness Optimised formulations, cost reduction, greater production efficiency
Differentiation Unique ingredients, own brands, defensible market narratives	Growth Faster market access, guaranteed regulatory compliance, global expansion
