Animal Nutrition Ingredients

Specialized ingredients for the animal nutrition industry

Animal-origin proteins, hydrolysates, collagens, marine ingredients and specialty raw materials for professional formulation.

ND Pharma & Biotech in animal nutrition

At ND Pharma & Biotech, we are expanding our research lines and ingredient selection for the animal nutrition industry.

Our offering brings together different raw material families for pet food development, protein formulations and specialty projects, with an approach grounded in ingredient technology and its industrial applications.

Our Ingredient Selection

01 **Egg & Animal Protein Ingredients**

02 **Protein Hydrolysates & Animal Specialties**

03 **Collagen & Marine Proteins**

04 **Specialty Nutritional Ingredients**

05 **Alternative Protein Ingredients**

Egg & Animal Protein Ingredients

Egg yolk and eggshell, chicken liver, and duck meat and derivatives. Ingredients for formulating products with different animal composition profiles.

Protein Hydrolysates & Animal Specialties

Porcine liver hydrolysates, bone broth and powdered poultry fat. Raw materials for studying nutritional, functional and sensory characteristics in industrial formulations.

Collagen & Marine Proteins

Highly hydrolyzed bovine collagen, fish collagen and fishmeal. Solutions for developing formulations based on proteins and fractions of marine origin.

Specialty Nutritional Ingredients

Avian-origin chondroitin sulfate and other specialized raw materials, selected for specific technical and regulatory evaluation projects.

Alternative Protein Ingredients

New insect-based protein sources and other emerging ingredients, currently under evaluation for authorized applications.

Technology and product development

Our work focuses on identifying the right raw materials for each project, assessing their specifications and supporting the development of new formulations for professional manufacturers.

Are you developing a new petfood formulation?
