

UNLIMITED INNOVATION

INTABIOTECH

**Applied innovation that transforms
industrial challenges into real
advantages**

R&D, formulation and supply of functional ingredients and biotechnological solutions for food, animal feed and nutritional supplementation.

PROPUESTA DE VALOR

Innovation only has value when it translates into results

Lower risk

Greater technical clarity and reduced exposure to audits and markets.

Better implementation

Support from initial idea through to effective commercialisation.

Sustainable advantage

Commercial differentiation that is defensible before clients, distributors, and regulators.

The client does not buy raw materials. They buy security, clarity, and the ability to compete.

QUIÉNES SOMOS

A company built to integrate science, formulation and market

Scientific back office

Technical-regulatory-legal knowledge integrated into every solution.

Vertical model

R&D&i, manufacturing and sourcing & supply under the same industrial logic.

Real proximity

From regional producers to large industrial groups, with close support.

UNLIMITED INNOVATION

Unlimited Innovation does not mean "many products"

It means a real capacity to solve challenges on multiple fronts

Innovation is not a catalogue line: it is the logic that connects categories, technologies, formulations, processes and commercial strategy.

A proposal with an international base and expanded structure

51

Productive sectors

27+

Production centres

400+

Approved suppliers

35+

Years of experience

Scale only matters if it generates an advantage for the client: more supply resilience, more technical options, and more capacity to build hybrid proposals where others offer loose references.

MODELO DIFERENCIAL

Not just products: diagnosis, development, supply and support

→ Root cause diagnosis

We understand the actual requirement before proposing any solution.

→ Data-driven development

Science, evidence and customer orientation in every formulation.

→ Industrial implementation

Support from laboratory to production scale and market access.

INTABIOTECH helps its clients to **solve**, not just to purchase. This allows for better margin defence and more stable commercial relationships.

Protecting the product is protecting the brand and the bottom line

PureNis®

Natural antibacterial peptide based on nisin. Effective against *Listeria* and *Clostridium*. Applicable in cheeses, dairy products, meats, beverages and eggs.

Extended shelf life

Technologies that reduce microbiological risk, protect stability and maintain quality standards in sensitive categories.

Natural perception

Solutions compatible with FDA and EU regulation, without compromising clean label positioning.

CONSERVACIÓN INTELIGENTE

Preserving more is not enough: we must preserve better

Microbiological protection

Proven efficacy against key pathogens in critical food categories.

Perceived naturalness

No chemical residues, compatible with clean label and consumer trends.

Dual compliance

Formulations designed to simultaneously meet both FDA and European regulations.

Reducing sodium without destroying the product

1

Reduxalt™

0% sodium, 100% flavour. 1:1 replacement. Clean label attributes confirmed.

2

LOSOD™

Substitution of up to 50% of NaCl without compromising sensory experience.

3

SALTBAL™ RSM

20–50% sodium reduction while maintaining intensity of flavour and mouthfeel.

Reduction possible between **20 and 100%** of sodium, with sensory integrity and phased implementation in meats, snacks and cheeses.

Public health, regulatory pressure and sensory experience: all three at once

Healthier

Aligned with regulatory trends and the global demand for sodium reduction.

More marketable

Without sacrificing the organoleptic profile or the label appeal to the consumer.

More defensible

Industrially viable, scalable and with complete technical-regulatory support.

BABY FOOD

When the market demands precision, purity and regulatory criteria

Certified BF grade

Maximum levels of chlorates and perchlorates guaranteed for the most vulnerable segments.

Regulatory frameworks

EU Reg. 231/2012 · Chinese food standard · FCC · FDA. Multi-market compliance assured.

Signal of maturity

In baby food, it is not enough to "have ingredients". One must master purity, specification and residual risk.

SPORTS NUTRITION

From ingredient to performance and brand positioning

Energy and performance

Amino acids, concentrated extracts and functional platforms for high-level athletes.

Pure extracts

Fruits, vegetables, herbs and mushrooms for drinks and functional products with a clean label profile.

Holistic wellbeing

Immunity, recovery, healthy ageing and digestive health in a single platform.

EXTRACTOS VEGETALES

Natural shouldn't mean vague: it must mean traceable, sustainable and premium

"100% natural extracts, obtained through patented, state-of-the-art technology systems, with ultra-premium quality and guaranteed traceability."

Origin traceability

Every extract linked to its source, process and demonstrable quality standard.

Real functionality

Botanicals that support health claims and respond to the demands of serious formulators.

Commercial credibility

Compatible with clean label and health & wellness strategies with technical support.

Sustainable
Sourced

COLORS & FLAVORS

Innovation also enters through the senses

Advanced formats

Powder, encapsulated, freeze-dried, liquid, emulsion and extracts.
Total adaptation to the client's industrial process.

CO₂ technology

Supercritical CO₂ extractions for flavours of maximum purity and efficiency.

Sensory clean label

Totally natural mixtures to replace synthetic colourings without compromising performance.

INTABIOTECH also enters the decisive terrain of **sensory experience, organoleptic identity and product adaptation to the market.**

ITB COCOA

A proprietary brand that reinforces the industrial stature of the company

Sourced in Africa · Crafted in Spain

Superior quality, constant innovation and commitment to customers all over the world.

Proprietary assets

Brand developed with an international market logic, not just intermediation.

Industrial density

Credibility that extends to the entire corporate proposal of INTABIOTECH.

Cross-sector innovation throughout the agri-food chain

Reliability

Acids, acid salts and disinfectants with rigorous quality standards.

Competitiveness

Individualised management to optimise cost-effectiveness in every project.

Tailored formulations

Acidifiers, antifungals, preservatives, rehydrants and personalised premixes.

The cross-sector nature of INTABIOTECH favours cross-selling and more strategic relationships with multi-sector groups.

NUEVOS ESPACIOS DE VALOR

Innovation also means entering under-served spaces sooner and better

Women's Health

Addressing historical systemic gaps in research, clinical trials, and product development for women's health.

Cosmetics & Beauty

Premium ingredients ranging from green chemistry to marine biotechnology. Science applied to brand identity.

Strategic vision: INTABIOTECH operates where there is **real need**, **technical complexity**, and the **opportunity for differentiation** with higher margins and greater perceived value.

CHEMICALS

Chemical and industrial capability with international reach

Fine chemicals

Manufacturing, importing and distribution for research, laboratory and industrial scale.

Biochemicals

Support for the European and international chemical industry with proven export capability.

Robust proposal

Integration of ingredients, biotechnology, fine chemicals and compliance in a single platform.

A company that integrates all of this becomes more resilient to commoditisation and more valuable to complex clients.

Innovation reaching the market requires files, compliance and documentary defence

01

Label and claims review

Regulatory validation of nutritional and health claims in multiple markets.

02

Supplements & FCM packs

Complete dossiers for supplements, food contact materials and novel food.

03

Regulatory due diligence

Country-by-country matrices, feed additive renewals and novel food pre-assessment.

04

AI-powered compliance

Legal, scientific and documentary profiles, and experts in solutions with artificial intelligence.

- ❏ Innovation that does not reach the market does not generate business. The DRC Unit is where INTABIOTECH most clearly separates itself from a commodity supplier.

MODELO DE NEGOCIO

INTABIOTECH as an integrated platform for value creation

Such a platform helps the client to buy better, formulate better, defend their products, scale with less friction and build more solid brands. That is much more valuable than a catalogue.

CIERRE CORPORATIVO

Unlimited Innovation, with real meaning

INTABIOTECH turns innovation into industrial advantage.

INTABIOTECH turns innovation into real competitive advantage.

Safety · Reformulation · Functionality

Botanicals, sensoriality, baby food, sports nutrition, cocoa, feed, fine chemicals and regulatory access.

Science → Market

Transforming scientific and regulatory knowledge into safer, healthier and more competitive products.
