Safer and More Sustainable Products

We are a biopharmaceutical and biotechnological company, with a solid scientific medical and biochemical foundation, and strong tradition and experience in the cosmetic and beauty field.

As science is part of our reason to exist, the foundation of every development and the light that shines after each development we made is related to the development of products and services that may help in some ways to make our lives better.

Chemistry and the provision of Chemicals, no matter if there are API's, Biochemicals, Analytical Reagents, Raw Materials, Starters, Intermediates or any other, is a strong demanding and time consuming task. From manufacturing and/or globally sourcing to plant auditing, re-processing, adjusting and analysis to fit our client's exigencies to store, classification, controlling, packaging, compliance, registration, Health & Safety issues and delivering worldwide.

Sometimes, all those complex proceedings became made and completed behind the scenes and public awareness about the importance of a safety-oriented and knowledgeable team work is less than existent. So the labor of a company like ND Pharma & Biotech may be relegated to a second stage as we do not sell or produce (barely) finished products to the final consumer.

This is why we want to let you to know the immense effort and continuing improvement that our people is making every day to reach that level of excellence and professionalism in the provision of goods and services, with the best quality available at the most affordable price, not forgiving all the issues surrounding this activities.

But our work is of capital importance when we supply hundreds of client companies worldwide that are using our products in their own ones. So with this in mind, we encourage to all our partners, employees and associates to pursue the safes and more sustainable chemicals we are able to find, manufacture, process and serve, ensuring the tranquility of all those who trust on our Company.

This is the way we want to participate within the improvement of our society and worlds, just giving to our customers the better of the best, without sacrificing our planet and environment. Looking to the Nature and being inspired by its rules.
